

Contents

1. The CMS experiment at the LHC—design and initial performance	11
1.1. Introduction	11
1.2. CMS detector	12
1.3. CMS trigger and data acquisition system	13
1.4. CMS operation	15
1.5. Commissioning and initial detector performance results	17
2. The Level-1 muon trigger. Performance	22
2.1. Level-1 trigger	22
2.1.1. Calorimeter trigger algorithms	23
2.1.2. Muon trigger	25
2.1.3. Level-1 event selection	30
2.2. Muon trigger performance	32
2.2.1. Level-1 muon trigger efficiency	32
2.2.2. Level-1 muon trigger rates	33
2.2.3. Level-1 muon trigger timing	33
3. The muon track reconstruction at the High-Level trigger	36
3.1. Introduction	36
3.2. HLT operation	36
3.3. HLT reconstruction software	39
3.4. Basics of the muon reconstruction	41
3.5. Track and primary-vertex reconstruction	43
3.5.1. Seeding and pixel-based reconstruction	43
3.5.2. Combinatorial Track Finder	45
3.6. Muon reconstruction at the HLT	47
3.6.1. Level-2 reconstruction	48
3.6.2. Level-3 reconstruction	48
3.6.3. Muon isolation	49
3.6.4. Performance	50
4. Selected physics results	53
4.1. Introduction	53
4.2. Higgs physics	53
4.2.1. $H \rightarrow \gamma\gamma$	54
4.2.2. $H \rightarrow ZZ \rightarrow 4\ell$	55

4.2.3. $H \rightarrow \tau\tau$	56
4.2.4. Combination of Higgs measurement and Higgs properties determination	58
4.3. Vector boson production, top physics and QCD	58
4.4. Other selected measurements	60
4.4.1. Charged particle multiplicities and momentum spectra	60
4.4.2. Topological correlations in two-particle distributions	61
4.4.3. Search for rare $B/B_s \rightarrow \mu^+\mu^-$ decays	62
4.5. Searches for new phenomena beyond the Standard Model	63
4.6. Heavy-ion physics with CMS	64
5. Perspective outlook and summary	65
5.1. Introduction	65
5.2. CMS upgrades during Phase-I	65
5.2.1. RPC and CSC upslope in LS1	65
5.2.2. New Level-1 trigger	66
5.2.3. HCAL modifications	66
5.2.4. Pixel Detector replacements	66
5.3. Phase-II upgrades	67
5.4. Summary of physics results	67
5.5. Summary of muon trigger operation and author's contribution	68
A. The PACT for RPC system	69
A.1. Introduction	69
A.2. PACT system	70
A.2.1. Layout of the system	70
A.2.2. PAC algorithm	71
A.2.3. Segmentation and data flow	72
A.2.4. HSCP trigger	73
A.2.5. Commissioning challenges	75
A.3. PACT performance	75
A.4. Role of the RPC system in Level-1 muon trigger	77
B. Development of methods for track reconstruction, primary vertex finding and seed generation with the Pixel Detector	79
B.1. Introduction	79
B.2. Components of the reconstruction software	80
B.3. Estimate of track position uncertainties	81
B.3.1. Parametrization of hit errors	81
B.3.2. Parametrization of multiple scattering	81
B.3.3. Track bending in the longitudinal plane	82
B.4. Finding hit pairs	82
B.5. Finding hit triplets	85
B.6. Evaluation of the parameters of pixel-tracks	88
B.7. Pixel vertexing	89
B.8. Generation of seeds	90
B.8.1. Seeds from hit pairs	91
B.8.2. Seeds from hit triplets	91
B.9. Conclusions	91
C. Development of High-Level trigger algorithms for muon isolation	92
C.1. Introduction	92
C.2. Simulation	93
C.3. Isolation algorithm	94
C.3.1. Optimization of algorithms	95

C.3.2. Calorimeter isolation	96
C.3.3. Pixel isolation	97
C.3.4. Tracker isolation	100
C.4. Overall performance	105
C.4.1. Rate reduction	105
C.4.2. Signal efficiency	107
C.4.3. Algorithm timing	108
C.4.4. Discussion	108
C.5. Conclusions	109
D. Acronyms	110
Acknowledgements	111
Bibliography	112
