CONTENTS

Introduction ......................................................... 11
Cr-spinel as a geochemical indicator. ........................... 11
The Sudetes and the Central Sudetic ophiolite ................. 12

Geological setting of the Jordanów-Gogołów and Braszowice-
Brzeźnica massifs ................................................. 15
The Jordanów-Gogołów massif ................................... 15
The Braszowice-Brzeźnica massif ............................... 17

Sampling and analytical techniques ............................ 21

Petrological description of chromitites from the Jordanów-
Gogołów and Braszowice-Brzeźnica massifs and geochemical
features of primary Cr-spinel ................................... 22
Petrological features of the Jordanów-Gogołów chromitites .......................... 22
Petrological features of the Braszowice-Brzeźnica chromitites ......................... 26
Chemical composition of primary Cr-spinels from the Jordanów-Gogołów chromitites . 30
Chemical composition of primary Cr-spinels from the Braszowice-Brzeźnica chromitites . 36

Alteration of the Jordanów-Gogołów and Braszowice-Brzeźnica
chromitites .......................................................... 41
Chromitites from the Jordanów-Gogołów massif ..................... 41
Chromitites from the Braszowice-Brzeźnica massif ............... 54

Genesis and metamorphic evolution of the Jordanów-Gogołów
and Braszowice-Brzeźnica chromitites .......................... 65
Origin of the chromitites from the Central Sudetic ophiolite . ............. 65
Alteration processes reflected in the Jordanów-Gogołów and Braszowice-Brzeźnica
chromitites .................................................................. 71
Geotectonic implications for the Central Sudetic ophiolite ................. 79

Conclusions ......................................................... 84

References ......................................................... 86
