## Introduction

### References

## PART I Treatment vs new portrait of the HIV epidemic

### CHAPTER 1 Epidemiology of HIV infection in Poland in light of the situation in Europe and worldwide

#### Conclusions

#### References

### CHAPTER 2 Tolerance of the antiretroviral treatment vs aging of the individuals living with HIV

#### Summary

#### References

## PART II RESEARCH ON THE BRAIN IN HIV INFECTION – CURRENT CHALLENGES

### CHAPTER 3 Aging of the brain in HIV infection

#### Introduction

#### Physiological aging of the brain

#### Morphological exponents of changes in the brain due to aging

#### Immune response changes associated with age

#### Neurobiochemical changes in the aging brain

#### Changes in the central nervous system in HIV infection

#### Entering of HIV into the CNS

#### Destruction of nerve cells

#### Compartmentalization of HIV in the CNS

#### Chronic inflammation of the CNS and activation of the immune system

#### Pathomorphological changes in the CNS

#### Neuroimaging studies

#### Clinical manifestations of HIV infection in the CNS

#### Antiretroviral therapy and the CNS

#### Factors influencing brain aging in HIV-infected patients

#### Age of HIV-infected patients

#### Processes affecting aging of the brain

#### ART in elderly patients

#### Clinical symptoms of brain aging in HIV-infected individuals

#### References

### CHAPTER 4 The use of magnetic resonance imaging in diagnosing and monitoring cerebral lesions in HIV-infected patients while taking into account the aging processes

#### Introduction

#### Neuroimaging methods and techniques using magnetic resonance imaging

#### Conventional structural imaging

#### Mapping the diffusion tensor parameters

#### Functional imaging

#### In vivo spectroscopy

#### Organic changes in the brain in HIV-infected patients as observed with MR imaging

#### The processes of brain aging in MR images

#### Summary

#### References

### CHAPTER 5 Magnetic resonance spectroscopy studies in patients infected with HIV

#### Introduction

#### Proton magnetic resonance spectroscopy

#### Metabolites measured with the use of MRS

#### MRS applications in research on the effects of HIV infection and aging of the central nervous system

#### Aging process and HMRS spectrum in healthy as well as HIV-infected individuals

#### Aging process and HMRS spectrum in HIV-infected individuals

#### The use of the MRS technique in neuroimaging of the neuropsychological deficits associated with HIV infection

#### Summary

#### References

### CHAPTER 6 Mapping brain abnormalities in aging HIV-infected individuals. A review of neuroimaging

## studies

### Introduction

Structural magnetic resonance imaging studies of the HIV-infected brain

Functional magnetic resonance imaging studies of the HIV-infected brain

fMRI, HIV and aging

Application of PET in examining the HIV-infected brain

Application of PET in examining aging HIV-positive subjects

Conclusions

References

## CHAPTER 7 Relationship between white matter integrity and neurocognitive outcomes in human immunodeficiency virus (HIV)

Background

Method

Database search

Participants

Methodology

DTI analysis

Neuropsychology

Results

General DTI results

DTI correlation with neuropsychology

DTI and the global neuropsychological score relationship

Specific neurocognitive tests

Processing speed

Verbal learning

Attention interference

Prospective memory

Mental control

Hierarchical perception

No relationship between DTI and neuropsychology

Discussion

References

Appendix 1 Pubmed search syntax

Appendix 2 Participants

Appendix 3 DTI Methodology

Appendix 4 Neuropsychology testing

## CHAPTER 8 Aging of the brain in HIV infection: literature review of the studies using resting state functional magnetic resonance imaging

Introduction

Assumptions underlying RS-fMRI research paradigm

Changes in the spontaneous brain activity related to aging

Changes in the spontaneous brain activity in individuals aging with HIV infection

The relationship between RS of the brain and neurocognitive functioning in HIV infection

Summary

References

## **PART III Psychological problems in HIV-infected individuals Nature Reviews**

### CHAPTER 9 Depressive disorders in individuals with HIV infection in the context of aging

Introduction

Depressive disorders in HIV-infected people

Depressive disorders in the elderly

Aging of HIV-infected people

Summary

References

### CHAPTER 10 Factors determining neuropsychological functioning in individuals who live with HIV/AIDS

Introduction

Biological factors

Psychological factors

Depression
